Power Notice

1. The device is a power-required device, meaning it will not work till it is powered. If your networks should be active all the time, please consider using UPS (Uninterrupted Power Supply) for your device. It will prevent you from network data loss or network downtime.
2. In some area, installing a surge suppression device may also help to protect your Switch from being damaged by unregulated surge or current to the Switch or the power adapter.

- 7 -

6. Installing the Switch

This part describes how to install your Gigabit Ethernet Switch and make connections to it. Please read the following topics and perform the procedures in the order being presented.

Note

This Switch does not need software configuration.

Desktop Installation

To install the Switch on desktop, simply follow the following steps:

- Step 1:** Place the Switch on the desk near a power source.
- Step 2:** Keep some ventilation space between the Switch and the surrounding objects.

Note

When choosing a location, please keep in mind the environmental restrictions discussed in Chapter 7 under Product Specifications.

- 8 -

Step 3: Connect your Switch to network devices.

- A. Connect one end of a standard network cable to the 10/100/1000 RJ45 ports on the rear panel of the Switch.
- B. Connect the other end of the cable to the network devices such as printer servers, workstations or routers, etc.

Step 4: Supply power to the Switch.

- A. Connect one end of the power cable to the Switch.
- B. Connect the 5V DC power adapter to a standard wall outlet.

When the Switch receives power, the Power LED should remain solid Green.
